Instructions	Procedures
Using a wrench turn the nut anticlockwise to release the nut from the body. Cut the (metal or plastic) pipe square, remove burns & chamfer the end of the pipe with a chamfering tool.	
1 Push the pipe into the fitting, through the nut, split ring and o-ring, as far as it will go until it meets the internal edge stopper. Fully tighten the nut. Do not undo or remove the nut from the body.	
2 Cut the PE pipe square, remove burns & chamfer the end of the pipe with a chamfering tool. Mark the insertion depth on the PE pipe. Lubricate the end pipes.	
3 Push the PE pipe into the fitting, through the nut, split ring and o-ring, as far as it will go until it meets the 1st resistance. The mark on the pipe is now just in front of the nut.
