# ELYSÉE

## HISTORY

Founded in 1969, Elysée was initially dedicated to the cultivation of flowers. This gave the founders firsthand experience and a full understanding of the diversity of irrigation needs. With such knowledge and experience, the natural next step in the business was to start designing and developing irrigation systems. This was a stepping-stone to further expansion, this time into the field of water supply and piping systems.

Elysée manufactures and supplies piping systems & fittings for Building & Infrastructure, Irrigation, Landscape and Industry.

Based in Cyprus, a key location at crossroads of three continents, Elysée serves more than 65 destinations in Europe, the Middle East, South Africa, Japan, Australia and New Zealand.

## OUR VISION

*"To be a green leader worldwide through Innovative, Smart, Easy to use Piping Systems."*

### GREEN COMPANY

Elysée acknowledges that businesses have a tremendous impact to climate change and can help in the fight against it. For this reason, we are setting a strategic approach to help us ultimately lead the way to a circular economy model, a testimony of our commitment to quality, towards the fulfillment of our goals for sustainability. Generally, a company's minimized carbon footprint is what leads to carbon neutrality. We are dedicated to our dream to guide Life on a green path. Our goal is to continue striving for becoming a leading sustainable world supplier in piping systems, thus, keep offering to the public a wide selection of the most trustworthy products and of the highest standards. At the same time, we are taking all the necessary steps to ultimately become a Green Leader and an exemplary model for other Cypriot & European businesses.

### STREAMING WATER. STREAMING LIFE.

Our love for water led to Elysée conception. From all the resources in the planet we consider water as the most valuable. Water is a living cycle. It moves, transforms and makes life possible. Our respect for the value of natural resources and our commitment to preserve them has always been Elysée's primary concern.

## WHY ELYSÉE

- **Green company.** Elysée acknowledges that businesses have a tremendous impact to climate change and can help in the fight against it. For this reason, we are setting a strategic approach to help us ultimately lead the way to a circular economy model.
- **Easy to Use.** Elysee products are developed in close collaboration with end users. Designed for durability, simplicity of installation, and long-term performance.
- **Know-how.** Elysée has a strong position in the Plastic Piping Systems market because to its 40 years of expertise.
- **Truly International.** Presence in 65 countries in all 5 continents through an ever-increasing family of distributors.
- **Reliability & Quality Assurance.** Elysée is certified by the most reputable international standardization organizations such as DVGW, OVGW, WRAS and KIWA among others.

## RESEARCH AND DEVELOPMENT

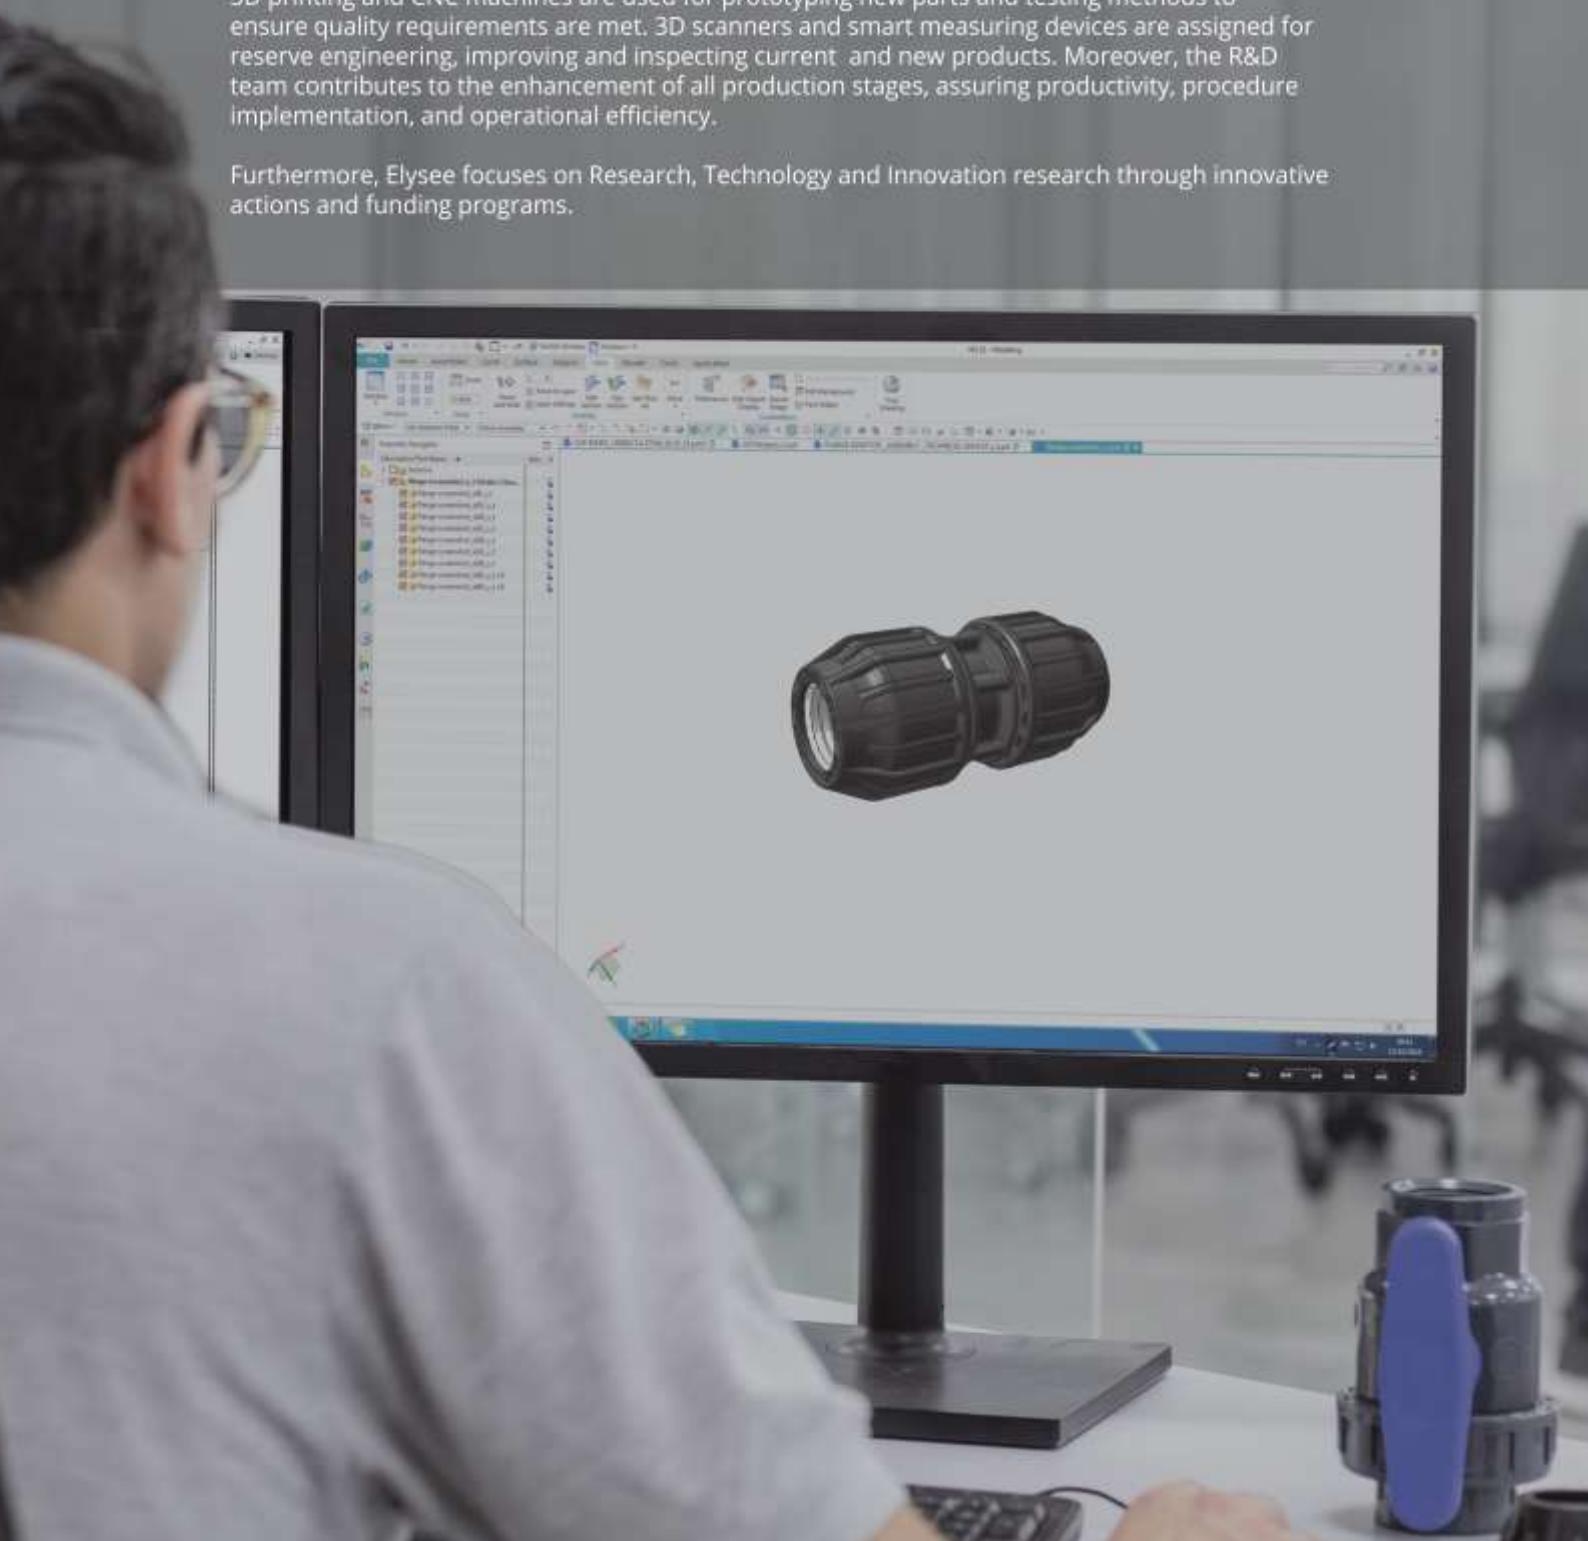

For more than 15 years, Elysee has made significant investments in Research and Development (R&D) activities. The company establishes an in-house R&D department to conduct significant research and innovation activities, increasing the company's competitive edge over the competitors. Indeed, R&D is critical to the business brand and performance both locally and worldwide.

Several patents and industrial designs have been granted, with others pending.

The R&D team is made up of great mechanical engineers and product designers that work on many projects with the goal of designing and developing breakthrough product solutions as well as re-engineering the current ones.

3D printing and CNC machines are used for prototyping new parts and testing methods to ensure quality requirements are met. 3D scanners and smart measuring devices are assigned for reverse engineering, improving and inspecting current and new products. Moreover, the R&D team contributes to the enhancement of all production stages, assuring productivity, procedure implementation, and operational efficiency.

Furthermore, Elysee focuses on Research, Technology and Innovation research through innovative actions and funding programs.

# QUALITY, A MATTER OF PRINCIPLE AND PRACTICE

Quality has been a primary element guiding Elysée activities from its beginnings. By introducing and implementing a quality management system, we monitor our operations and efficiency, to enhance our overall performance. Today, Elysée Irrigation Ltd is delighted to have globally recognized pipe system accreditation, demonstrating its dedication to excellence. Elysée has kept quality as the key foundation of all its operations, hence being reputable for its high-quality products in all aspects.

Our Quality Control (QC) team is composed of potent mechanical and technical engineers, along with highly trained inspectors who pay attention to detail according to the standards followed. Through carefully constructed Quality Control Guidelines, the team daily monitors the production lines and ensures the best quality of products, according to international standards to meet customers' satisfaction.

With advanced technology at hand, we perform daily quality inspections using smart measuring devices, specialized testing machines and an upgraded database. Furthermore, having our own state of the art 3D scanner gives a lead on constant failure-point detection, generating reports and proceeding with corrective actions for further improvements were required.

From raw material to end-product and into the hands of the customer, our goal has always been to deliver the optimum quality possible. All products undergo in-house laboratory tests and in external accredited labs, in compliance with current relevant standards. This ensures and guarantees our products, as they are thoroughly checked and approved by professional bodies.

## WARRANTY

Our warranty includes the repair or replacement of defective parts in our production plant or in the after-sale service location. Replacement or repair of parts under this warranty will not extend the warranty period of the original product. No warranties are given in regard to normal wear and tear due to use of the products. The expenses for return and shipment of defective materials shall be paid by the buyer.

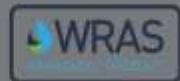

This warranty does not cover those cases in which the product:

- Has been incorrectly handled
- Has been repaired, maintained, or modified by an unauthorized person
- Has been repaired or maintained with other than original pieces
- Has been installed or placed in operation incorrectly

## CERTIFICATIONS

Elysée's products are designed to meet the general standards and are conducted to variety of tests to verify that they meet the product requirements. Elysée holds over 20 notable International Product Certifications, including DVGW, KIWA, SII, WRAS, SAI WaterMark and OVGW.

ISO9001, ISO 14001, ISO 45001, and EMAS certifications demonstrate Elysée's dedication to quality, environmental preservation, and employee safety at all phases of manufacturing, from raw materials to sales.

## PP clamp fittings (Elysee)

Scope of this certificate:  
All the products contained, tested in accordance with the Kiwa-Regulations for Conformity Assessment, may  
therefore be designated "conform" if the products supplied by  
Elysee Irrigation Ltd.

All aspects of this product certificate are dealt with the most important in this clause as indicated in the product certificate may, in certain cases, be valid upon to comply with the relevant regulations given below. The scope of the product certificate is limited to the following conditions and has been:

Elysee Irrigation Ltd.  
03.03.2018

Holder of this certificate is advised:

Area Manager Elysee Irrigation Ltd.  
Elysee Irrigation Ltd.  
5 Persepolis Street

# Compression Fittings

## Compression Fittings

Compression Fittings

**ε - Epsilon Series** (Metric - PN 16 bar)

A

- Agriculture
- Landscape
- Building Infrastructure
- Industry

Elysée offers a complete range of mechanical compression fittings designed for conveyance of fluids, gaseous fuels, compressed air, chemical solutions and slurries under high pressure.

Our mechanical compression fittings comply with all relevant international standards in terms of dimensions and mechanical properties.

They are also ideal for the conveyance of potable water and fluids for human consumption, since they are produced in accordance with national and international standards and regulations for health and safety.

To ensure that all requirements of standards and regulations are fulfilled, our fittings are tested regularly and approved worldwide by the main testing institutes and certification bodies.

## Nut

Modern design and unique shape

## Split ring

Grips the pipe firmly when the system is assembled ensuring that the pipe is not pulled out, even under maximum force

## Body

Made by top quality and certified raw materials

## System

Unbreakable, corrosion resistant, suitable for tough working conditions such as pipe bending and pulling out

## Insert

Captive with the body during disassembly even if the pipe is pulled-off

## O-Ring

Certified for being in contact with water intended for human consumption

## Certificates

## Materials & Components

1. BODY - Polypropylene PP-B / 2. O-RING - Nitrile Rubber (NBR 70) / 3. INSERT - Polypropylene PP-B / 4. SPLIT RING - Polyacetal / 5. NUT - Polypropylene PP-B

**BODY** - It is the main and most important component of the fitting system. It can be shaped in several dimensions and configurations to satisfy the requirements and arrangements of the fluid's direction. It has a snagging arrangement internally to position the O-ring and insert, ensuring leak tightness when assembled with a pipe.

A male trapezoidal thread is used externally to join the body with the nut. The body is made with black high performance polypropylene copolymer PP-B. It offers an excellent long-term pressure resistance and also high impact resistance compared to other plastic materials.

**NUT** - The main purpose of this component is the tightening of the pipe with the fitting system. Internally, a female trapezoidal thread is used to enable the connection with the fitting body. Externally, it has an ergonomic designed surface for easy handling during assembly with a pipe. Made by black high performance polypropylene copolymer PP-B.

**INSERT** - The main purpose of this component is to secure the O-ring and keep it in position during handling and operation. Made by black high performance polypropylene copolymer PP-B.

**O-RING** - The main purpose of this component is to ensure leak tightness between the fitting system and the inserted pipe. Made by Nitrile rubber (NBR 70) with the ability to withstand high service temperature, excellent compression set, tear, and abrasion resistance.

**SPLIT RING** - The main purpose of this component is to ensure optimum grip between the fitting system and the pipe. Internally, several sharp triangular teeth are in contact with the pipe when inserted to the fitting system. Externally, conical ribs tighten progressively on the cap's cone and pipe while pressure is applied in the system or pulling force is increased. Made by high performance polyacetal material with sufficient stiffness and hardness to provide high-end load resistance. They can be used to join all types of polyethylene pipes.

### Dimensions and Characteristics

Our fittings comply with the dimensional requirements and characteristics of the following relevant standards:

- EN 712 / 713 / 715 / 911
- ISO 3458 / 3459 / 3501 / 3503 ISO 17885- DIN 8076  
(Performance Series)

### Application Fields

Our fittings are suitable for joining high and low density polyethylene pipes (PE-HD, PE-LD, PE40, PE63, PE80, PE100) conforming to: EN 12201 - ISO 3607 / 17885 - DIN 8072 / 8074

### Fluids other than Water

The fitting may convey a wide variety of fluids.

*Note:* Refer to chemical resistance section for additional information. Contact us for advice on specific applications.

### Operating Temperature

The fittings are not to be used in hot water although they withstand the same temperature as the poly-ethylene pipe itself. The fittings withstand sub-zero temperatures. The pressure rating has to be adjusted as shown in the figure below, if the fittings are to be used at higher temperatures.

### Operating Pressure

For fittings from Ø 16 up to Ø 110 mm - 16 bar at 20°C

### UNIQUE FEATURES

In order to tie everything together (gasket, backing ring, body), Elysée has produced an ergonomic design which allows the installation of flanged adaptors by a single person.

#### 1. Centering Alignment Nerves

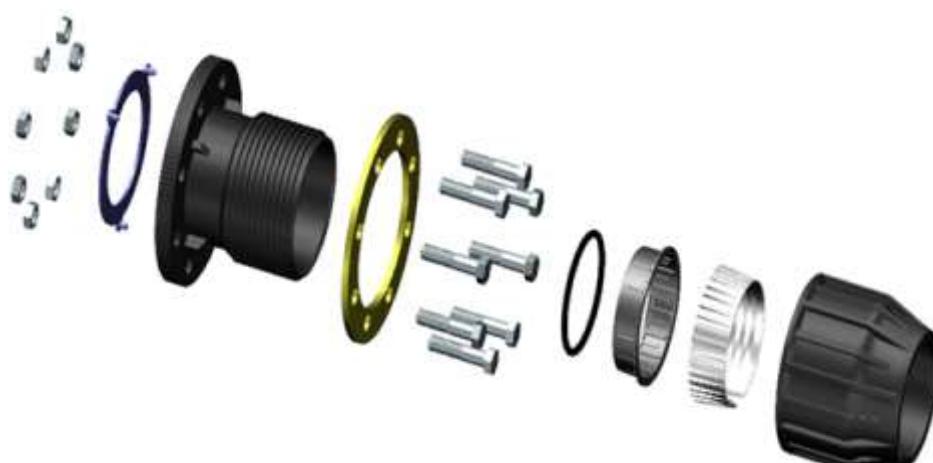

The nerves have been adjusted for the auto-alignment of backing ring at the center of flanged adaptor.

#### 2. Fixed Constraint Gasket

The design of the novel gasket allows a fixed connection with adaptor, which ensures its retention during installation.

# Compression Fittings

## Compression Fittings

Compression Fittings

**ζ - Zeta Series** (Metric - PN 16 bar)

A

- Agriculture
- Landscape
- Building Infrastructure
- Industry

Elysée offers a complete range of fittings, designed for use in cold water services and in flush, overflow, warning and waste pipe. Our fittings comply with the relevant standards EN12201, ISO17885 & BS1972 in terms of dimensions and mechanical properties. To ensure that all requirements of standards and regulations are fulfilled, our fittings are tested regularly and approved by the main certification body WRAS.

## ADVANCED DESIGN

The High-Tolerance range, is designed to connect pipes with various (in close range) external diameter as defined in EN12201, ISO17885, & BS1972.

This new range is following a modern ergonomic design with clear “family” feel to the existing range of Elysée fittings. The High-Tolerance fittings were designated as user friendly, meant to decrease the alterations to the minimum.

High Tolerance type is available for sizes  $\frac{1}{2}$ ",  $\frac{3}{4}$ " & 1". The breakthrough designed fitting seals pipes with in-range external diameter. Furthermore the same fitting can be installed on pipes as defined by several standards (EN12201, ISO17885, BS1972, etc.).

## FEATURES:

Dynamic Rubber seal compressing and expanding in a way to seal the relevant pipes dimension.

Direct insert were the insert can transfer user's force directly on the rubber seal for better sealing.

Short split ring that grips well on the relevant pipes bearing the requested pull-out force.

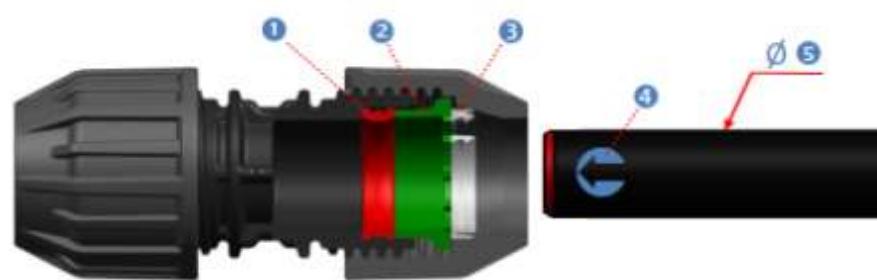

Push-fit technology were pipe can be inserted without force, just by loosening the nut.

The availability of external diameters are as follows (dimensions below are the nominal outside diameters):

$\frac{1}{2}$ " – Ø20.00 mm up to Ø21.20 mm

$\frac{3}{4}$ " – Ø24.95 mm up to Ø27.05 mm

1" – Ø32.00 mm up to Ø33.85 mm

## OPERATING PRESSURE

Fittings are suitable for working pressures up to 16 bar @ 20°C and/or the maximum designated by the relevant standard of the polyethylene pipe in use.

## DIMENSIONS AND CHARACTERISTICS

Our fittings comply with the dimensional requirements and characteristics of the standards EN12201, ISO17885 & BS1972.

## APPLICATION FIELDS

Our fittings are suitable for joining high and low density polyethylene pipes (PE-HD, PE-LD, PE40, PE63, PE80, PE100) conforming to: EN12201 - ISO17885 - BS1972 (Type 32)

## THREADING

Threads (BSP) are manufactured according to: ISO 7, ISO 10226 and BS 21.

## Certificates

DVGW

Potable Water

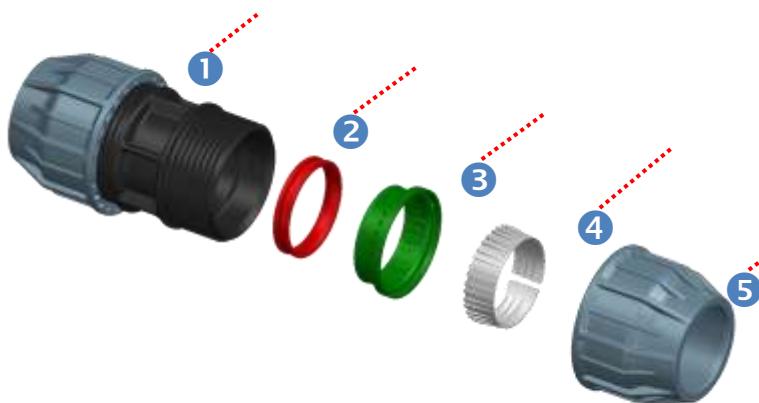

Elysée offers a complete range of Zero-Force fittings for sizes 75, 90 & 110 mm designed for conveyance of fluids, gaseous fuels, compressed air, chemical solutions and slurries under high pressure. Our Zero Force fittings comply with all relevant international standards in terms of dimensions and mechanical properties. They are also ideal for the conveyance of potable water and fluids for human consumption, since they are produced in accordance with national and international standards and regulations for health and safety.

To ensure that all requirements of standards and regulations are fulfilled, our fittings are tested regularly and approved worldwide by the main testing institutes and certification bodies.

## ADVANCED DESIGN

Elysée Zero Force, is a range of fittings designed to connect metrical Polyethylene pipes. This new range is following a modern ergonomic Easy-Fit design with clear "family" feel to the existing range of Elysée fittings. The Zero Force range is 16 bar rated, approved and comply with all relevant international standards relating to compression fittings.

## FEATURES

- Complete Range of fittings from 75 mm up to 110 mm
- No insertion force is necessary for the pipe installation
- Conforms to hygiene and sanitary requirements
- Tested according to all related standards
- Designed for an extensive lifespan
- Abrasion and chemical resistant
- Use of top-class raw materials for better pressure resistance
- No loose component employing no-pull-out insert
- Use of top-class raw materials for better pressure resistance
- No loose component employing no-pull-out insert
- Ease of handling with ergonomic design of nut
- Longer pressure zone to accommodate pipe end
- Proven leak-free secured system
- Modern design and shape

**(1) BODY** - It is the main and most important component of the fitting system. It can be shaped in several dimensions and configurations to satisfy the requirements and arrangements of fluid's direction. It has a snagging arrangement internally to position the O-ring and insert, ensuring leak tightness when assembled with a pipe. A male trapezoidal thread is used externally to join the body with the nut. The body is made with black high performance polypropylene copolymer PP-B. It offers an excellent long-term pressure resistance and also high impact resistance compared to other plastic materials.

**(2) RUBBER SEAL** - Main purpose of this component is to ensure leak tightness between the fitting system and the inserted pipe. It is made by Synthetic rubber (EPDM 70) with the ability to withstand high service temperature, excellent compression set, tear, and abrasion resistance.

**(3) INSERT** - Main purpose of this component is to secure the o-ring and keep it in position during handling and operation. It is made by black high performance polypropylene copolymer PP-B.

**(4) SPLIT RING** - Main purpose of this component is to ensure optimum grip between the fitting system and pipe. Internally, several sharp triangular teeth are applied and are in contact with pipe when inserted to the fitting system. Externally, conical ribs are applied to fit and grip progressively on cap's cone and pipe while pressure is applied in the system or pulling force is increased. It is made by high performance polyacetal (POM) material with sufficient stiffness and hardness to provide high-end load resistance. It can be used to join all types of polyethylene pipes.

**(5) NUT** - The main purpose of this component is the tightening of pipe with the fitting system. Internally, a female trapezoidal thread is applied to enable the connection with the fitting body. Externally, it has an ergonomic designed surface for easy handling during assembly with a pipe. It is made by black high performance polypropylene copolymer PP-B.

## Compression Fittings

Compression Fittings

**λ - Lambda Series** (Metric - PN 10 bar)

A

- Agriculture
- Landscape
- Building Infrastructure
- Industry

Elysée offers a complete range of PN10 compression fittings for sizes 20mm up to 63mm designed for conveyance of fluids, gaseous fuels, compressed air, chemical solutions and slurries under high pressure.

Our PN10 compression fittings comply with all relevant international standards in terms of dimensions and mechanical properties.

They are also ideal for the conveyance of potable water and fluids for human consumption, since they are produced in accordance with national and international standards and regulations for health and safety.

To ensure that all requirements of standards and regulations are fulfilled, our fittings are tested regularly and approved worldwide by the main testing institutes and certification bodies.

## **ADVANCED DESIGN**

PN10 compression fittings are designed to connect metrical Polyethylene pipes. This range is following a modern ergonomic & Easy-Fit design with clear "family" feel to the existing range of Elysée's PN16 series. This PN10 rated series, complies with all relevant international standards relating to compression fittings.

## **OPERATING PRESSURE**

Fittings are suitable for working pressures up to 10 bar @ 20°C and/or the maximum designated by the relevant standard of the polyethylene pipe in use.

## **DIMENSIONS AND CHARACTERISTICS**

Fittings comply with the dimensional requirements and characteristics of the following relevant standards:

- EN 712 / 713 / 715 / 911
- ISO 3458 / 3459 / 3501 / 3503 ISO 17885- DIN 8076 (Performance Series)

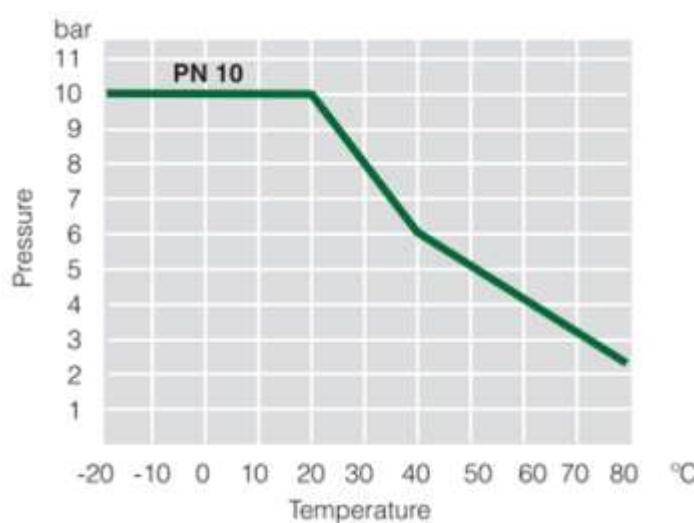

## **APPLICATION FIELDS**

Fittings are suitable for joining high and low density polyethylene pipes (PE-HD, PE-LD, PE40, PE63, PE80, PE100) conforming to:

- EN 12201
- ISO 3607 / 17885
- DIN 8072 / 8074

## **THREADING**

Threads (BSP) are manufactured according to: ISO 7, ISO 10226 and BS 21.

## Compression Fittings

Compression Fittings

**Ó - Omicron Series** (Metric - PN 16 bar)

A

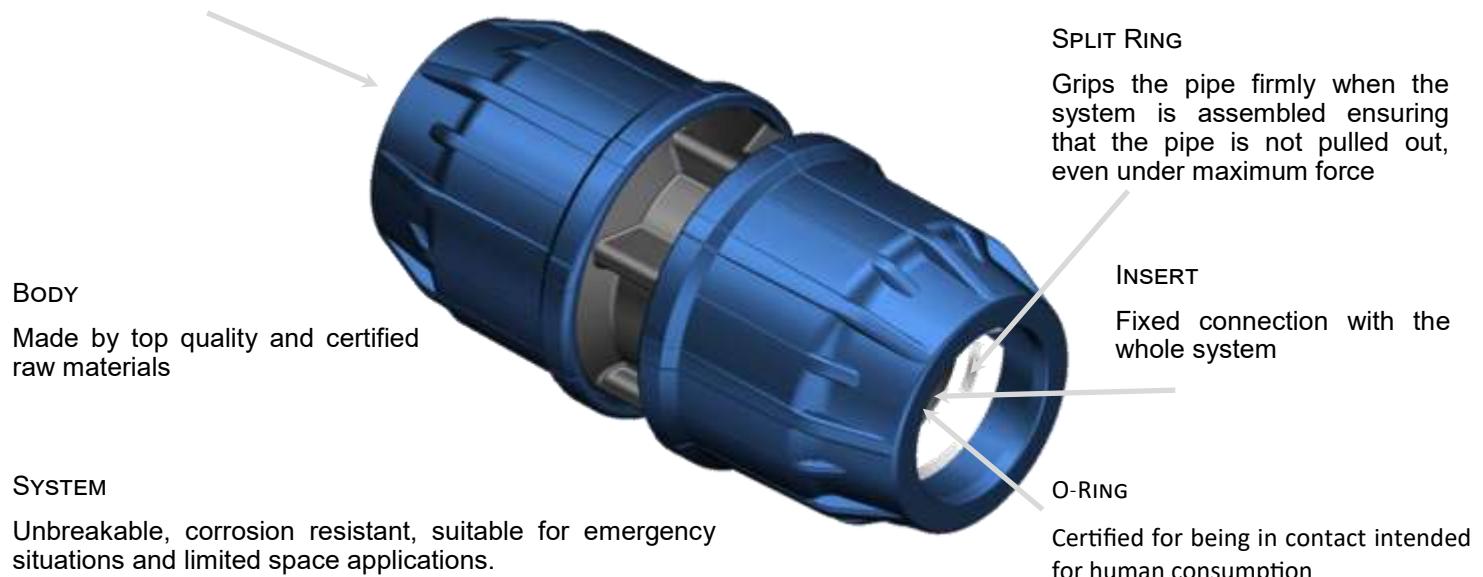

- Agriculture
- Landscape
- Building Infrastructure
- Industry

Elysée offers a complete range of push-fit fittings for sizes 20, 25 & 32 mm designed for conveyance of fluids, gaseous fuels, compressed air, chemical solutions and slurries under high pressure. Our push-fit fittings comply with all relevant international standards in terms of dimensions and mechanical properties. They are also ideal for the conveyance of potable water and fluids for human consumption, since they are produced in accordance with national and international standards and regulations for health and safety. To ensure that all requirements of standards and regulations are fulfilled, our fittings are tested regularly and approved worldwide by the main testing institutes and certification bodies.

Elysée Push-Fit, is a range of innovative push-fit fittings designed to connect to metrical Polyethylene pipes. This new range is following a modern ergonomic design with clear "family" feel to the existing range of Elysée fittings. The Push-Fit range is 16 bars rated, DVGW approved and comply with all relevant international standards related to compression fittings.

## ADVANCED DESIGN

### NUT MODERN DESIGN AND UNIQUE SHAPE

## FEATURES

- Range of fittings from 20 mm up to 32 mm including all models
- Anti-vandal and security design features
- No need for assembly tools
- Closed-type fitting ensuring single-movement installation
- Demountable if need by use of special wrench
- Designed for an extensive lifespan
- Abrasion and chemical resistant
- Conforms to international hygiene and sanitary requirements

## QUALITY MANAGEMENT

The complete range of push-fit fittings of ELYSÉE Irrigation have been tested and approved by all leading certification bodies, including DVGW (D), KIWA (NL), WRAS (GB), BV (AUS) and many others worldwide. Furthermore, ELYSÉE fittings are honored with product certifications on all related standards such as ISO 14236, EN 12201, DIN 8076 and AS/NZS 4129.

## OPERATING PRESSURE

Push-Fits are suitable for working pressures up to 16 bar @ 20°C.

## DIMENSIONS AND CHARACTERISTICS

Our fittings comply with the dimensional requirements and characteristics of the following relevant standards:

- EN 712 / 713 / 715 / 911 - ISO 3458 / 3459 / 3501 / 3503 ISO 14236 - DIN 8076 (Performance Series)

## THREADING

Threads (BSP) are manufactured according to: ISO 7, DIN 2999 and BS 21.

## RESISTANCE TO IMPACT

The thermoplastic materials used for manufacturing the fittings have excellent impact properties.

## ABRASION RESISTANCE

The fittings are suitable for the transportation of abrasive slurries and will withstand normal conditions found in urban, mining, industrial, rural water and waste water systems.

## EFFECT ON WATER

Water is essential to health and to the preservation of the environment. Water quality is commonly defined by its physical, chemical, biological and aesthetical (appearance and smell) characteristics. ELYSÉE fittings fully conform to international hygiene and sanitary requirements specified by standards such as BS6920 (UK), KTW (DE) and AUS/NZ 4020 (AUS)

## APPLICATION FIELDS

Our fittings are suitable for joining high and low density polyethylene pipes (PE-HD, PE-LD, PE40, PE63, PE80, PE100) conforming to:

- EN 12201 - ISO 3607 / 14236 - DIN 8072 / 8074

## TESTING OF FITTINGS

- Testing of raw material (MRS value)
- Internal pressure test of fitting body
- Pull-out test of fittings connected with PE-pipes
- Internal pressure test of fitting fixed with PE-pipes
- Leak tightness against low pressure
- Leak tightness under bending
- Melt mass-flow rate (MFR)
- Hygienic testing of fitting's body and sealing ring

# Compression Fittings

## Compression Fittings

Compression Fittings

**η - Eta Series** (Australian Rural PN 10 bar)

A

- Agriculture
- Landscape
- Building Infrastructure
- Industry

## Quality Management

Our Quality management system ensures top-class products in terms of performance, reliability and durability. This is a crucial parameter to ensure customer satisfaction and loyalty. Elysée quality system, ISO 9001, is approved by CCC and IQNet.

Elysée Rural fittings comply with the Australian Standards of:

AS/NZS 4129 - Fittings for Polyethylene (PE) pipes for pressure applications.  
AS/NZS 2698.3 - Plastic Pipe & Fittings for Irrigation and Rural applications.

In compliance with this standard, Elysée ensures regular supply of reliable products with approved quality.

## Dimensions and Characteristics

Our fittings comply with the dimensional and characteristics determined in the relevant standards of AS/NZS 4129 and AS2698.3.

## Application Fields

Our fittings are suitable for joining polyethylene pipes for pressure applications (PE63, PE80, PE100) conforming to AS/NZS 4130 and AS 2698.2.

## Fluids Other Than Water

The fitting may convey a wide variety of fluids. (Contact us for advice on specific applications.)

## Operating Pressure

Fittings from 20 up to 50 mm –10 bar nominal pressure @ 20°C

## Threading

Threads (BSP) are manufactured according to: EN 10226, ISO 7, DIN 2999 and BS 21. All internal (female) threads smaller than 3" are parallel. All other threads (male and female) are tapered. It is recommended that PTFE tape is used when making threaded joints/connections. Any other sealing compound must be confirmed as suitable. Assembly should be carried out by hand and final tightening by a strap wrench, if necessary. Extra care must be taken not to over tighten and otherwise damage the thread.

## Resistance to Impact

The thermoplastic materials used for manufacturing the fittings have excellent impact properties.

## Effect on Water

All fittings intended to be used for potable water supply systems or agricultural practices are manufactured according to the requirements of the relevant standards. Elysée fittings fully conform to international hygiene and sanitary requirements specified by standards such as BS6920 (UK), and AUS/NZ 4020 (AUS).

## Projected Life Expectancy

Based on the information available and the successful performance under the nominated test regime, the life expectancy is rated at 50 years before replacement or major repair. This rating is only a general guide to life expectancy and may increase or decrease depending on the quality of the installation, system operation and environment conditions as well as other geographical and site specific factors.

## Operating Temperature

The fittings are not to be used in hot water although they withstand the same temperature as the polyethylene pipe itself. The fittings withstand sub-zero temperatures. The pressure rating has to be adjusted as shown in the figure below, if the fittings are to be used at higher temperatures.

## Abrasion Resistance

The fittings are suitable for the transportation of abrasive slurries and will withstand normal conditions found in urban, mining, industrial, rural water and waste water systems.

## Weathering

Elysée fittings offer excellent weathering properties which protects against degradation due to ultra-violet radiation. Therefore, their use is permissible on exposed systems without additional protection.

## Certificates

## Testing of Rural Fittings

Several tests are carried out to verify the compliance of our rural fittings with the relevant standards through in-house testing as well as tests in external accredited laboratories. Furthermore, all quality procedures and practices are checked from the entry of raw material, until the delivery of the pipes to the customers. Out of the regular inspections of appearance, colour, marking and geometric characteristics, several mechanical and material tests are carried out as mentioned below:

### Testing Of Raw Material (MRS Value)

The selected raw materials of the fitting body (PP-B) is tested for long-term physical behaviour with successful MRS values in the range of 10 MPa, being the highest in the market.

### Melt Mass-Flow Rate (MFR)

The Mass Flow Rate of the fitting body is measured and then compared in opposition to the measured mass flow rate of the raw material. The difference between the two values should not exceed the 10%.

### Plastics Molded Material Test

The scope of this test is to verify the long term behaviour of the material of the fitting body in line with the ISO 1167 and ISO 9080.

### Hydrostatic Pressure Test for Assembled Joints

The entire assembly, body with pipe, is tested under hydrostatic pressure in order to investigate the leak-proof of assembled joints between the fitting and the rural pipe when the internal pressure is greater than the determined rating pressure of 10 bar. The test conditions used shall demonstrate compliance with ISO 1167.

### Leak-Tightness under Pressure When Subjected To Bending

In accordance with ISO 3503, this test checks the leak proofness of assembled joints under internal pressure when are performed under bending conditions on the prescribed radius

### Plastic Body Fittings Test

In accordance with ISO 1168, the resistance of plastic body fittings is tested when it's subjected to internal pressure.

### Opacity Test

The scope of this test is to determine the amount of light transmitted through the fitting wall in accordance with the ISO of 7686.

### Pressure Loss through Couplings:

This test determines the pressure lost through couplings, used to join polyethylene micro – irrigation pipes in accordance with the AS2698.3 standard.

### Resistance to Pull-Out Test of Assembled Joints

The scope of this test is to determine the resistance of the assembled joints to failure by pull-out when subjected to a specific test load, specified by the relevant standard of ISO 3501.

# **Compression Fittings**

## **Compression Fittings**

**Compression Fittings**

**Copper Series & Kit (for Australia)**

**A**

- **Agriculture**
- **Landscape**
- **Building Infrastructure**
- **Industry**

Elysée offers a complete range of fittings, designed for use connecting polyethylene to copper pipelines. Our fittings comply with the relevant standards AS/NZS 4129 in terms of dimensions and mechanical properties. To ensure that all requirements of standards and regulations are fulfilled, our fittings are tested and approved by the main certification body SAI Global.

## ADVANCED DESIGN

The Elysée copper fittings range, is a combination of two types of connection technology. The first type is the well-known polyethylene connection technology where a polyacetal split ring is consigned to grip to the polyethylene pipeline producing the necessary compression to withstand the pull-out forces. The second type is an already proven connection technology where is apply on other special ranges of our product line, consigning a metallic ring to grip to the copper pipeline producing the necessary compression to withstand the pull-out forces.

This new range is following a modern ergonomic design with clear “family” feel to the existing range of Elysée fittings. The copper fittings were designated as user friendly, meant to make the job easier to professionals and/or individuals.

## OPERATING PRESSURE

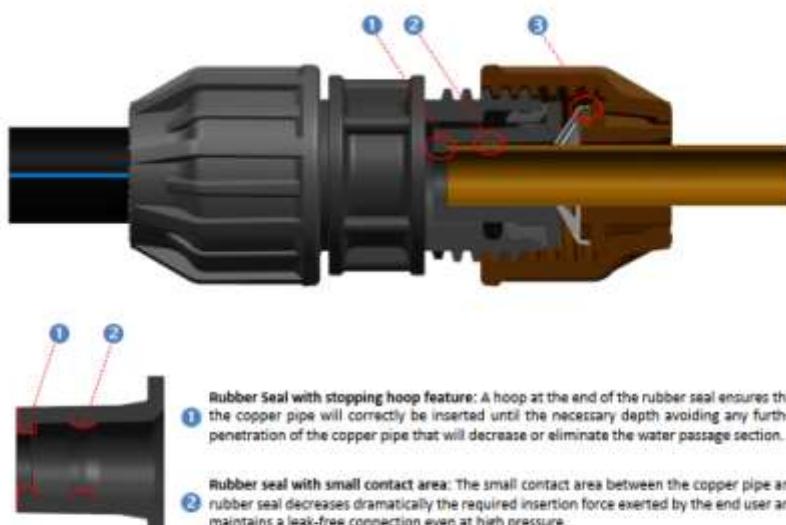

Fittings are suitable for working pressures up to 16 bar @ 20°C and/or the maximum designated by the relevant standard of the pipes in use.

## DIMENSIONS AND CHARACTERISTICS

Our fittings comply with the dimensional requirements and characteristics of the standards AS/NZS 4129.

## APPLICATION FIELDS

The polyethylene side is suitable for joining high and low density polyethylene pipes (PE-HD, PE-LD, PE40, PE63, PE80, PE100) conforming to AS/NZS 4130

## TESTING OF FITTINGS

- Testing of raw material (MRS value)
- Internal pressure test of fitting body
- Pull-out test of fittings connected with PE-pipes
- Internal pressure test of fitting fixed with PE-pipes
- Leak tightness against low pressure
- Leak tightness under bending
- Melt mass-flow rate (MFR)

Hygienic testing of fitting's body and sealing rings

# Compression Fittings

## Compression Fittings

Compression Fittings

**Zeeflex Series** (for Pool)

A

- **Agriculture**
- **Landscape**
- **Building Infrastructure**
- **Industry**

ZEEFLEX fittings can be used for connecting flexible PVC hoses used in swimming pool installations.

They are available for 50 & 63 mm flexible PVC hoses which are connected to a mechanical fastening mechanism on the one side, and a male or female solvent gluing or threading connection on the other side.

The materials used in the ZEEFLEX fittings ensure long lasting operation as well as excellent resistance to chemicals most commonly used in such kind of applications.

## QUALITY MANAGEMENT

The complete range of mechanical compression fittings of ELYSÉE Irrigation have been tested and approved by all leading certification bodies, including DVGW (D), KIWA (NL), WRAS (GB), BV (AUS) and many others worldwide. Furthermore, ELYSÉE fittings are honored with product certifications on all related standards such as ISO 14236, EN 12201, DIN 8076 and AS/NZS 4129.

## DIMENSIONS AND CHARACTERISTICS

Our fittings comply with the dimensional requirements and characteristics of the following relevant standards:

EN 712 / 713 / 715 / 911 - ISO 3458 / 3459 / 3501 / 3503 ISO 14236 - DIN 8076 (Performance Series)

**OPERATING PRESSURE:** Zeeflex fittings are suitable for working pressures up to 6 bars @ 20°C.

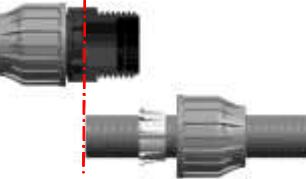

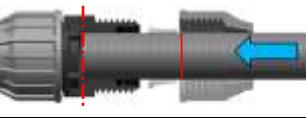

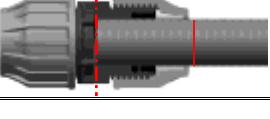

## FLUIDS OTHER THAN WATER

The fittings may convey a wide variety of fluids due to their high chemical resistance.

Note: Contact us for advice on specific applications.

## TESTING OF FITTINGS

- Testing of raw material (MRS value)
- Internal pressure test of fitting body
- Pull-out test of fittings connected with PE-pipes
- Internal pressure test of fitting fixed with PE-pipes
- Leak tightness against low pressure
- Leak tightness under bending
- Melt mass-flow rate (MFR)
- Hygienic testing of fitting's body and sealing ring

	PROCEDURES	INSTRUCTIONS
STEP 1		Undo the nut up to the last thread. Do not remove the nut from the body. Cut the pipe square, remove burns & chamfer the end of the pipe with a chamfering tool. Mark the length on the pipe, to which the pipe must be pushed in the fitting.
STEP 2		Keep the O-Ring and insert fixed on the body. Assembly is made easier by lubricating pipe, O-ring & inside of fitting with silicone lubricant.
STEP 3		Insert pipe into the fitting until it stops by the step.
STEP 4		Push nut & split ring forward until they reach the fitting.
STEP 5		Tighten the nut by means of special Elysee wrench.
STEP 6		Nut should be closed firmly but does not need to actually meet the body.

- Agriculture
- Landscape
- Building Infrastructure
- Industry

## QUALITY MANAGEMENT

Elysée quality system, ISO 9001:2008, is approved by CCC and IQNet. The complete range of mechanical compression fittings of Elysée Irrigation have been tested and approved by all leading certification bodies, including DVGW (D), KIWA (NL), WRAS (GB), BV (AUS) and many others worldwide. Furthermore, Elysée fittings are honored with product certifications on all related standards such as ISO 14236, EN 12201, DIN 8076 and AS/NZS 4129.

## EFFECT ON WATER

Elysée fittings fully conform to international hygiene and sanitary requirements specified by standards such as BS6920 (UK), KTW (DE) and AUS/NZ 4020 (AUS).

## DIMENSIONS AND CHARACTERISTICS

Our fittings comply with the dimensional requirements and characteristics of the following standards:

ISO 14236, EN 1092 and adequate Standards

## OPERATING PRESSURE

Universal adaptors are suitable for working pressures up to 6 bars @ 20°C.

## ABRASION RESISTANCE

The fittings are suitable for the transportation of abrasive slurries and will withstand normal conditions found in urban, mining, industrial, rural water and waste water systems.

## WEATHERING

Elysée fittings offer excellent weathering properties which protects against degradation due to ultra-violet radiation. Therefore, their use is permissible on exposed systems without additional protection.

## TESTING OF FITTINGS

- Testing of raw material (MRS value)
- Internal pressure test of fitting body
- Pull-out test of fittings connected with PE-pipes
- Internal pressure test of fitting fixed with PE-pipes
- Leak tightness against low pressure
- Leak tightness under bending
- Melt mass-flow rate (MFR)
- Hygienic testing of fitting's body and sealing ring

	INSTRUCTIONS	PROCEDURES
Step 1	<p>Using a wrench turn the nut anticlockwise to release the nut from the body.</p> <p>Cut the plumbing pipe square, remove burrs &amp; chamfer the end of the pipe with a chamfering tool.</p> <p>Mark the length on the pipe, to which the pipe must be pushed in the fitting.</p> <p>Push the pipe into the fitting, through the nut, split ring and o-ring, as far as it will go until it meets the internal edge stopper.</p> <p>Fully tighten the nut.</p>	 
Step 2	<p>Do not undo or remove the nut from the body.</p> <p>Cut the PE pipe square, remove burrs &amp; chamfer the end of the pipe with a chamfering tool.</p> <p>Mark the insertion depth on the PE pipe.</p> <p>Lubricate the end pipe.</p>	
Step 3	<p>Push the PE pipe into the fitting, through the nut, split ring and o-ring, as far as it will go until it meets the 1st resistance.</p> <p>The mark on the pipe is now just in front of the nut.</p>	

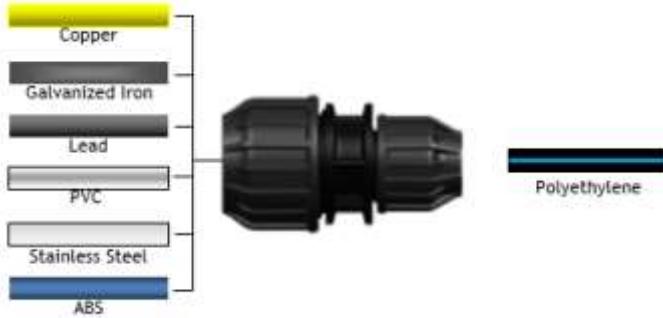

# Compression Fittings

## Global Transition - Universal Adaptor & Imperial Coupler

Suitable fitting for different pipe diameters and for tubes of different kind of materials (metal and plastics)

Product components are designed to seal the various diameters of material pipes.

Available in three different sizes

Special Fittings Metric  
No. **Coupling Global Transition**  
**321D**

321D03432	27-34 x 32	55	S

Universal Adaptor is an adaptor that provides means of connecting Polyethylene pipes to a variety of plumbing pipe materials using push-fit technology for fast connection.

Pipes made of materials such as Copper, Polybutylene & PEX can be inserted through the push-fit side of the fitting, ensuring optimum sealing and griping of the system.

Polyethylene pipes are inserted from the other side of the fitting which is operated with the Elysée well-proven mechanical fastening mechanism

# Saddles

## Saddles

Saddles

C

- **Agriculture**
- **Landscape**
- **Building Infrastructure**
- **Industry**

Can be used secondary line derivation from main lines of PE, PVC, or PP for irrigation, high pressure conveyance of water, chemical solutions and slurries.

Clamping part from 20mm up to 315mm diameter and threaded part from  $\frac{1}{2}$ " up to 4" diameter.

The high grade polypropylene material used ensures long lasting operation under demanding applications.

Excellent resistance to most commonly used chemicals for such kind of applications.

Suitable for use in potable water supply systems.

Suitable for exposure to sunlight (UV).

Nitrile sealing gasket for excellent sealing performance and chemical resistance.

#### DIMENSIONS AND CHARACTERISTICS

Saddle fittings comply with the dimensional requirements and characteristics of the relevant standards EN ISO 13460 & AS/NZS 4129. Threads (BSP) are manufactured according to EN 10226, ISO 7, DIN 2999 and BS 21.

#### OPERATING PRESSURE

16 bar @ 20°C for ø20 mm up to ø 110 mm.

(Exceptions: 12.5 bar for threads 1  $\frac{1}{4}$ " and above)

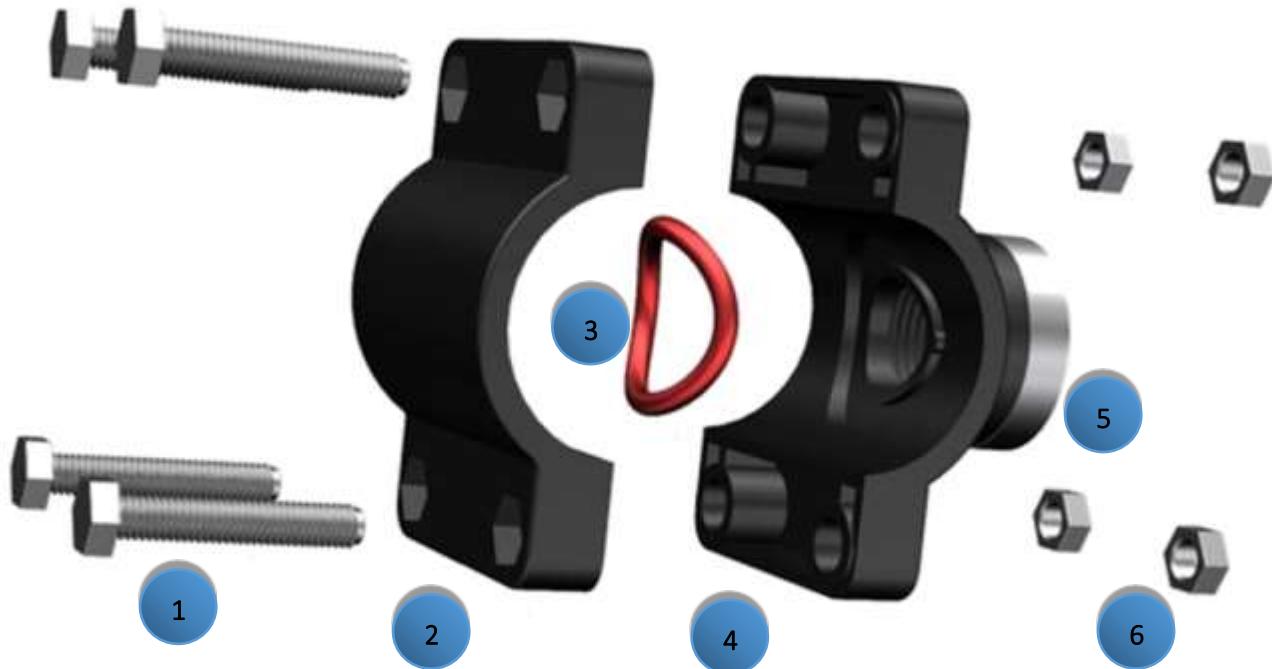

6 bar @ 20°C for ø125 mm up to ø 315 mm

(Exceptions: 4 bar for threads 3" and 4" on saddles 225 mm up to 315 mm)

<b>Model Code</b>	<b>Description</b>	<b>Available Sizes</b>
5500	Single 2, 4 & 6 Bolts	20 mm up to 200 mm - Threads $\frac{1}{2}$ " up To 2"
550A	Double 2, 4 & 6 Bolts	20 mm up to 200 mm - Threads $\frac{1}{2}$ " up To 2"
550B	Single 2, 4 & 6 Bolts Reinforced	20 mm up to 315mm - Threads $\frac{1}{2}$ " up to 4"
550C	Double 2, 4 & 6 Bolts Reinforced	20 mm up to 315 mm - Threads $\frac{1}{2}$ " up To 4"
550F	Single 2 & 4 Bolts with Flat Seal	40 mm up to 110 mm - Threads $\frac{1}{2}$ " up to 1"
550H	Single 2 & 4 Bolts Reinforced with Flat Seal & S.S. Bolts/Nuts	40 mm up to 110 mm - Threads $\frac{1}{2}$ " up to 1"
550T	Single 2,4 & 6 Bolts Reinforced and S.S. Bolts/Nuts	20 mm up to 315 mm - Threads $\frac{1}{2}$ " up to 4"
550V	2 & 4 Bolts <b>Blue</b> Single Reinforced with Flat Seal	50 mm up to 110 mm - Threads $\frac{3}{4}$ " & 1"

Refer to the technical manual for specific data sheets

## Materials & Components

(1) **BOLTS** – Constitute a fundamental part of the saddle in order to enhance restraint performance. The bolts meet the standard of ISO4018 & DIN933

(2) & (4) **BODY** – Major and most important component of the fitting system. It can be shaped in several dimensions and configurations to satisfy the requirements and arrangements of fluids direction. It has a snagging arrangement internally to position the O-ring and insert, ensuring leak-free tightness when assembled with a pipe. A male trapezoidal thread is used externally to join the body with the nut. The body is made with black high performance polypropylene copolymer PP-B.

(3) **O-RING** – Ensures leak tightness between the fitting system and the inserted pipe. It is made by food safe nitrile rubber (NBR 70) to withstand high service temperature, excellent compression set, tear, and abrasion resistance.

(5) **REINFORCING RING** – Made from stainless or galvanized steel, suitable for female threaded type compression fittings and saddles. Enable high strength and pressure resistance especially on large diameters and threads where the above factors are particularly critical.

(6) **METAL HEX NUTS** – Made from stainless or galvanized steel, available in several diameters and thicknesses for the optimum fit on each size of saddle.

## Single with 2 - 4 or 6 Bolts

2 Bolts

# Light-Weight Fittings

D

**Description:** Light-weight fittings for irrigation networks and low-pressure conveyance of water.

**Range:** Barbed series from Ø 16mm up to Ø 25mm, threaded series from Ø ½" up to Ø 1"

**Pressure Rating:** 6 bar at 20°C

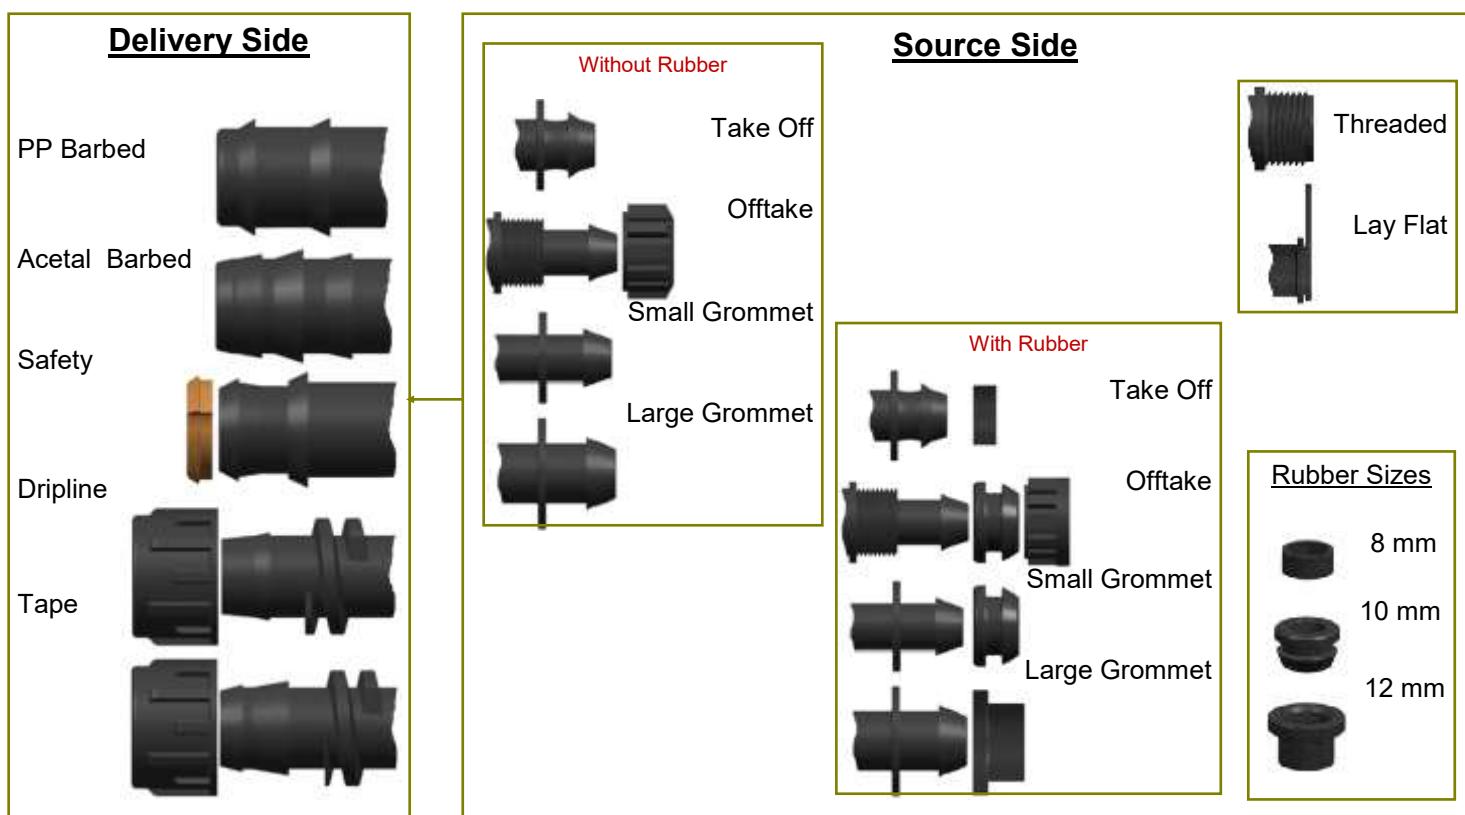

\* For other working temperatures please refer to the company

**Materials:** Polyacetal or Polypropylene copolymer PP-B

The fittings are suitable for use in potable water supply systems

The fittings are suitable for exposure to sunlight (UV) with excellent chemical resistance

# **Valves - Mini-Valves & More**

## **Valves - Mini-Valves & More**

**Valves - Mini-Valves & More**

- **Agriculture**
- **Landscape**
- **Building Infrastructure**
- **Industry**

Elysée offers a complete range of Stop-Cock valves for sizes 20, 25 & 32 mm designed for conveyance of fluids and developed for water utilities, plumbing, agricultural and irrigation applications, characterized as a reliable and versatile valve.

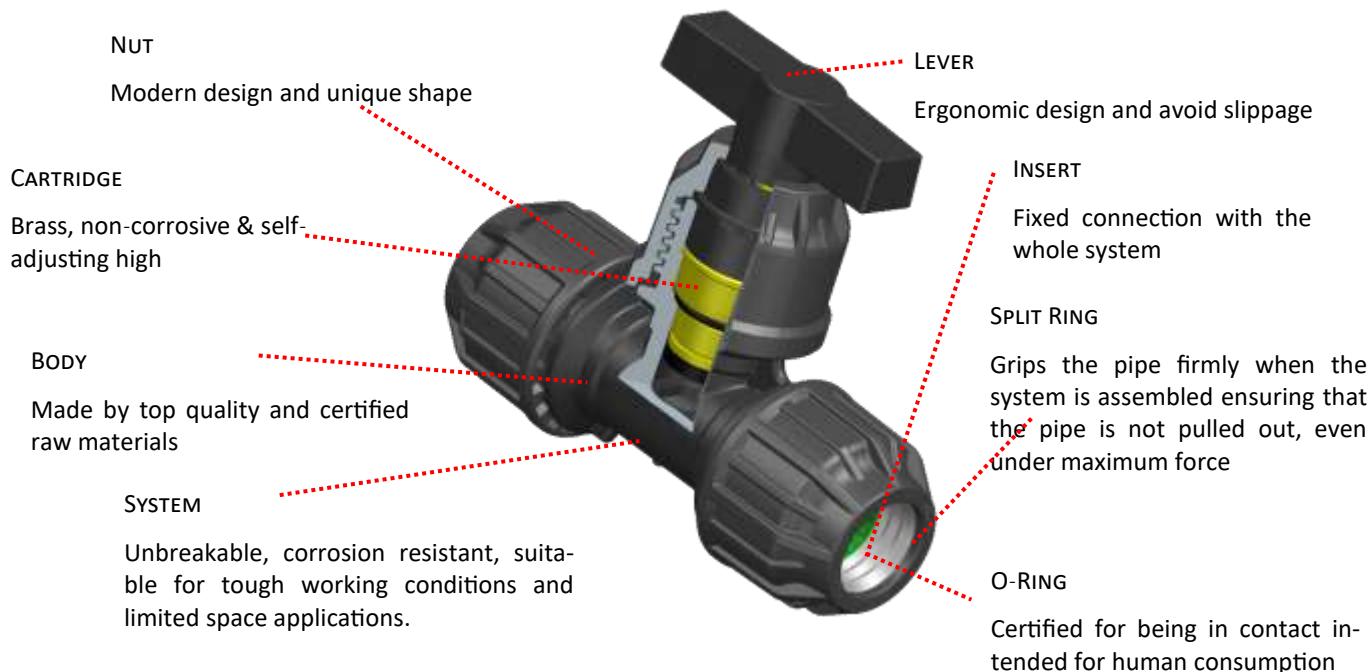

Our Stop-Cock valve comply with all relevant international standards in terms of dimensions and mechanical properties.

They are also ideal for the conveyance of potable water and fluids for human consumption, since they are produced in accordance with national and international standards and regulations for health and safety.

To ensure that all requirements of standards and regulations are fulfilled, our valves are tested regularly and approved worldwide by the main testing institutes and certification bodies.

#### ADVANCED DESIGN

This new range of valves is following a modern ergonomic design with clear "family" feel to the existing range of ELYSÉE fittings. The Stop-Cocks were designated as user friendly, meant to make the job easier to professionals and/or individuals.

#### FEATURES

- Complete Range of fittings from 20 mm up to 32 mm
- Mechanism can't be dismantled during operation
- Excellent flow characteristics
- Sensible pressure drop to the minimum
- Provides excellent flow control due to fine-tuning cartridge
- Keeps water hammering to minimum
- Conforms to hygiene and sanitary requirements
- Severe outdoor conditions with extensive lifespan
- Use of top-class raw materials for better pressure resistance
- No loose component employing no-pull-out insert
- Ease of handling with ergonomic design of nut
- Proven leak-free secured system

#### CERTIFICATES

WRAS

Potable Water

## QUALITY MANAGEMENT

ELYSÉE quality system, ISO 9001:2008, is approved by CCC and IQNet. To ensure that all requirements of standards and regulations are fulfilled, our fittings are tested regularly and approved worldwide by the main testing institutes and certification bodies.

## ABRASION RESISTANCE

The ball valves are suitable for the transportation of abrasive slurries and will withstand normal conditions found in urban, mining, industrial, rural water and waste water systems.

## EFFECT ON WATER

ELYSÉE ball valves are fully conform to international hygiene and sanitary requirements specified by WRAS and standards such as BS6920 (UK).

## STANDARDS

### PP ball valves

EN 12201-3 & ISO 17885

### PVC-U ball valves

British Standards. Fittings (inch) EN 1452-3, BS 4346

Fittings (metric) DIN 8063, KIWA 54, UNI 7442/75

Threaded Fittings BS21, DIN 2999, ISO 7/1

Solvent Cement BS EN 6920, BS4346 Part 3, WRAS Approved Valves EN 1452 Part 3 Din 2999 ISO 7/1

## CHEMICAL RESISTANCE

The chemical resistance properties of PP & PVC-U are excellent. It is resistant to most solutions of acids, alkalis, salts and to solvents that can be mixed with water.

## OPERATING PRESSURE

**PP ball valves** are suitable for working pressures up to 10 bars @ 20°C.

**PVC-U ball valves** are suitable for working pressures as follows:

Product	Size	Pressure (bar)
Fittings Solvent Cement	½" - 4"	15
Fittings Threaded	½" - 4"	10
Valves	½" - 2"	16
Valves	2 ½" - 3"	10

## WEATHERING

ELYSÉE ball valves offer excellent weathering properties which protects against degradation due to ultra-violet radiation. Therefore, their use is permissible on exposed systems without additional protection.

# MINI VALVES

## INTRODUCTION

Complete range of mini valves with a large variety of configurations combining between threaded, barbed, safety, lock, grommet, take off, offtake, dripline, tape, tap, etc. The products are light-weight, easy to install and suitable for exposure to sunlight (UV) with excellent chemical resistance.

Mini Valves comply with relevant international standards in terms of dimensions and mechanical properties. To ensure that all requirements of standards and regulations are fulfilled, mini valves are tested regularly and through company's testing procedures.

## WHY ELYSEE MINI VALVES (PRODUCT SPECIFICATIONS)

### FEATURES

PATENTED

#### HANDLE

Ergonomic design that provides effortless performance.

#### BODY

Strong structure for bending resistance and a smooth inside surface.

- Mechanism cannot be disassembled during operation
- Outdoor resistant with extensive life span
- Robust design with ease of handling and operation
- Body ribbed for strong bending
- A quarter turn from ON/OFF position
- Only two parts assembly
- Solid, one-piece handle
- Excellent flow characteristics
- Light-weight & easy to install
- Use of top-class raw materials

## MATERIALS AND COMPONENTS

The main purpose of the body is the guidance of fluids through the passage and to support a variety of configurations necessary of any possible application.

### 1. HANDLE:

Handle is produced as one-piece technology ensures leak tightness between the handle and the main body.

1.1 Valve Core: **Polypropylene Copolymer (PP)**

1.2 Sealing Sleeve: **Thermoplastic Elastomer (TPE)**

### 2. BODY: **Polyoxymethylene (POM)**

Body material ensure optimum strength and leak tightness under severe environment conditions.

## PATENTS

EU patented and WIPO has been filed.

**EP3183482B1**

**WO2016027150A1**

The Mini Valve is patented under European Patent Office\_EP3183482B1. The mini valve has an open-close mechanism with a valve handle that is an extension of the valve core molded together as one part, and a locking mechanism adapted to lock on the

o 182LSLB02	2 LPH - Long (16 cm)	10.000	

Stakes for Micro-Irrigation

No. **Dripping Stake**  
182

Code	Size	Bag	Box
o 182DSSB00	Short (8 cm)	10.000	
o 182DSMB00	Medium (12 cm)	10.000	
o 182DSL00	Long (16 cm)	10.000	

**Labyrinth Stakes**

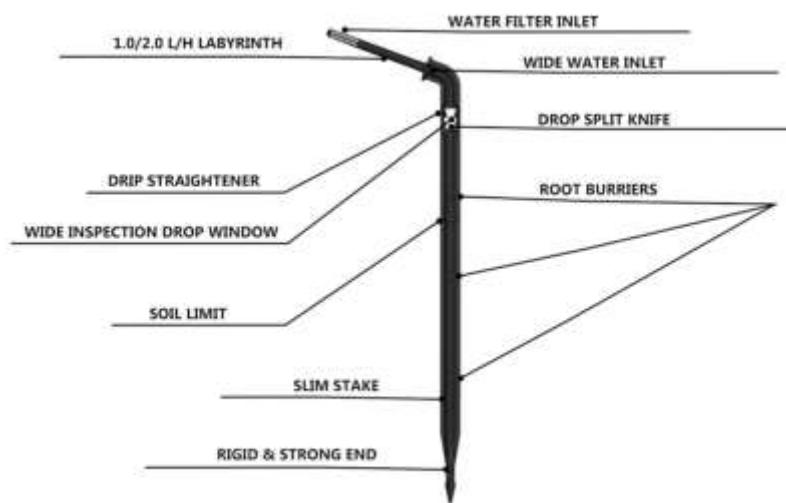

Available with two Flow Rates: 1 &amp; 2 LPH

Available in different Lengths: **8 – 12 & 16 cm**

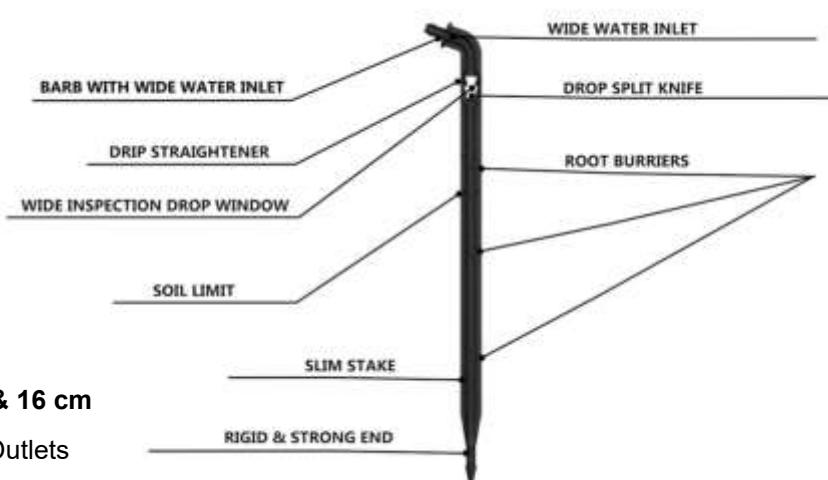

Recommended for using:

As Independent Dripper

In Combination with button Drippers to maintain Constant Flow Rate in multiple Outlets

**Drop Guide Stakes**Available in different Lengths: **8 – 12 & 16 cm**

Recommended for using with Single Outlets

## Pressure Compensated Emitters -

Pressure Compensated Emitters

No. **Karavas Emitter On-Line P.C.**  
182

Code	Size	Bag	Box
o 182KC0002	2 LPH - Blue	100	2.500
o 182KC0004	4 LPH - Green	100	2.500
o 182KC0008	8 LPH - Red	100	2.500
o 182KC0024	24 LPH - Orange	100	2.500

- Cylindrical labyrinth with wide water passages.
- Color distinction for different flow rates
- Chemical-resistant silicon diaphragm
- Emitter cover with color distinction for Drain and Non-Drain function

### Ultrasonic Welding Technology

Advanced welding process of Karavas PC prevented by a parallel formation and welding of the cover, around the edge of the body, making it impossible to leak regardless of the climatic or pressure conditions

## HDPE Standards

EN12201 - Plastics piping systems for water supply, Polyethylene (PE). Specifies the characteristics of pipes made from polyethylene (PE 100, PE 80 and PE 40) for buried and above ground applications intended for the conveyance of water for human consumption, raw water prior to treatment, drainage and sewerage under pressure, vacuum sewer systems and water for other purposes.

# Polyethylene & Soft Pipes

## LDPE Standards

CYS 106 – Low Density Polyethylene (LDPE) for agricultural applications. This standard specifies the characteristics of preferable black LDPE pipes intended to be used for conveyance of water for agricultural applications. This standard covers pipes with nominal outside diameters from 16 mm to 40 mm and nominal pressures of 4 bar and 6 bar. It also specifies the test parameters for the test methods referred to in this standard.

ISO 8779 – Plastics piping systems, Polyethylene (PE) pipes for irrigation, Specifications. This International Standard specifies the pipes (mains, sub-mains and laterals) with nominal outside diameters from 12 mm up to and including 63 mm made from polyethylene (PE) intended to be used for the conveyance of water for irrigation. It also specifies the general properties of PE and the test parameters for the pipes designated.

## MDPE Standard

BS6572 - Specification for blue polyethylene pipes up to nominal size 63 for below ground use for potable water. Specifies the requirements for small sizes of pipe in metric series diameters coloured blue for carrying potable water, especially underground or in ducts with other services. Suitable for water authority use in respect of proposed byelaw requirements for protecting water quality.

How to read the code:

How to read the table

SDR - the ratio of pipe diameter to wall thickness

SDR = D / s

D = pipe outside diameter (mm)

s = pipe wall thickness (mm)

S.F. - Is the safety factor of a pipe and has standard values of 1.25 and 1.6

SF = Short-Term Strength / Short-Term Load in Service

# Polyethylene & Soft Pipes

Kerynia Regular Driplines the good choice...

## Ideal Applications

Row crops, Orchards, Vegetables, Gardening, Landscaping

Suitable for both on surface and subsurface installations

Very high resistance to agrochemicals and hard field conditions

Manufactured from the finest raw materials providing : durability and long-lasting performance

## Product Characteristics

Kerynia dripline is produced with the highest quality raw material, by integrating the most advanced emitter of the industry. Provides extreme tensile strength, since it is produced with high-quality resins. Offers excellent performance on the field due to the flawlessly designed, injected molded Kerynia emitter with very low CV. The unique design of Kerynia emitter, provides high clogging resistance and offers the highest emission uniformity. The combination of those elements translates to superior quality, evenly grown crops and increased overall yield which leads to higher income for every farmer worldwide.

### Cylindrical Turbulent Emitter

Compact and economical emitter for a wide range of both surface and subsurface applications. Suitable for permanent crops and multi seasonal usage, provides easy and trouble-free installations for unexperienced farmers.

Advanced water inlet design, increases filtering area and prevents particle insertion in the emitter, thus enhancing the anticlogging performance

The excellent design of the flow path width, depth and length determines the flow rate of the emitter and the anti-clogging ability.

A high turbulent flow path design creates a vortex effect inside the emitter and therefore prevents clogging.

Emitters are tested from both CIT and Irstea institutes and achieved the highest ranking for CV, emission uniformity, flow accuracy and clogging resistance

**Kerynia Emitters Specifications**

Nominal Flow Rate (LPH @ 1bar)	Constant (k)	Exponent (x)	Coefficient of Variation CV (%)	Water Passage (Width x Depth x Length) (mm)	Filtration Area (mm <sup>2</sup> )	Recommended Filtration (mesh/micron)

# Polyethylene & Soft Pipes

Morfou P.C. Driplines the right choice...

## Ideal Applications

Precision irrigation, Uneven terrain, Row crops, Orchards, Vegetables, Gardening, Landscaping  
Suitable for both on surface and subsurface installations  
Very high resistance to agrochemicals and hard field conditions  
Manufactured from the finest raw materials providing: durability and long-lasting performance

## Product Characteristics

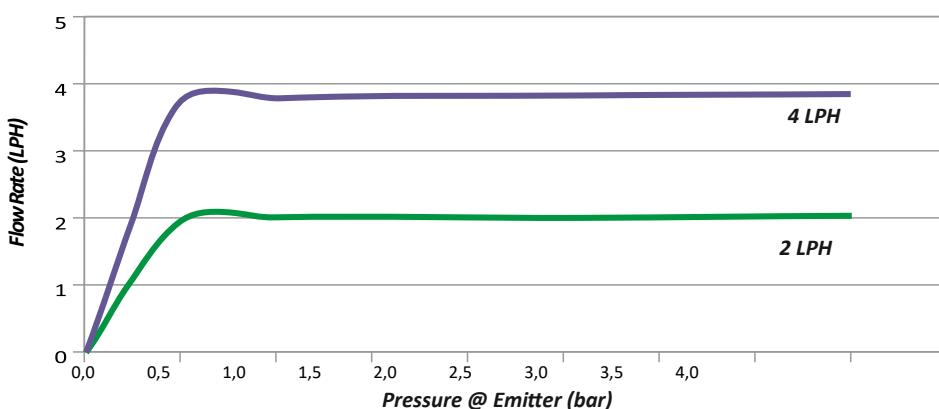

Morfou PC driplines are produced with the highest quality raw material, by integrating the most advanced emitter of the industry. Provides extreme tensile strength, since it is produced with high-quality resins. Offers excellent performance on the field due to the flawlessly designed, injected molded Morfou PC emitter with very low CV. The unique design of Morfou PC emitter, provides high clogging resistance and offers the highest emission uniformity. The combination of those elements translates to superior quality, evenly grown crops and increased overall yield which leads to higher income for every farmer worldwide. Morfou PC dripline is the most durable Pressure Compensating dripline, designed for steep and rocky terrain, permanent crops with long laterals, for both surface and subsurface applications.

## Cylindrical Turbulent Emitter

Morfou P.C. Emitter Specifications Drain (D), Non-Drain (ND) and Anti-Siphon (AS) options

The antisiphon (AS) system both in D and ND versions is a specially designed mechanism that prevents suction of dirt and impurities into the emitter. The AS feature enables Morfou PC dripline to be installed underground (SDI), perfectly maintaining its irrigation characteristics and its multiyear durability. With the Non-drain system, the dripline remains full of water during irrigation intervals, ensuring immediate and uniform irrigation along the dripline. Moreover, Non-Drain emitters eliminate drainage and refill effect, and improve efficiency in pulse irrigation. In order to achieve the Non-Drain function, the emitter opens at 0,30 bar and closes at 0,18 bar.

# J Pressure Pipes & Fittings

Elysée offers a comprehensive range of pipes and fittings, designed for water supply and for buried and above-ground drainage and sewerage. EN ISO 1452 piping systems are available in a complete range of metric series from Ø16mm to Ø315mm with pressure rating from 6 bar up to 25 bar. Pipes can be found at straight lengths of 3, 4 and 6 m. In order to ensure that all requirements of standards and regulations are fulfilled, Elysée's U-PVC plastics piping systems, are tested according to standards requirements in our well-equipped testing room.

Furthermore, Elysée EN ISO 1452 piping systems are being tested and certified according to EN ISO 1452, by external third party certification body (OFI Austria). Product certification has been obtained, ensuring EN ISO 1452 compliance.

EN1452 specifies the requirements for U-PVC piping systems regarding: Materials, Appearance, Colour, Geometrical Characteristics, Mechanical Characteristics, Physical Characteristics, Performance requirements, Specifications for the Sealing Ring.

## Quality Management

Our Quality management system ensures top-class products in terms of performance, reliability and durability. This is a crucial parameter to ensure customer satisfaction and loyalty. Elysée quality system, ISO 9001, is approved by CCC and IQNet.

## Certifications

Elysée U-PVC pressure piping systems conform to the European standard of EN ISO 1452. This standard specifies the requirements of solid-wall pressure pipes and fittings which are intended for water supply, both for buried and above-ground usage.

In compliance with this standard, Elysée ensures regular supply of reliable products with approved quality.

## Quality Management

Our Quality management system ensures top-class products in terms of performance, reliability and durability. This is a crucial parameter to ensure customer satisfaction and loyalty. Elysée quality system, ISO 9001, is approved by CCC and IQNet.

## Certifications

Elysée U-PVC pressure piping systems conform to the European standard of EN ISO 1452. This standard specifies the requirements of solid-wall pressure pipes and fittings which are intended for water supply, both for buried and above-ground usage.

In compliance with this standard, Elysée ensures regular supply of reliable products with approved quality.

## Dimensions and Characteristics

Nominal dimensions of mean outside diameters, the nominal wall thickness and their tolerances comply with the dimensions specified by the relevant standard of EN ISO 1452-2.

## Potable Water

All plastics and non-plastic products used for the production of Elysée piping systems, such as pipes, fittings, sealing rings, lubricants etc., which are intended for conveyance of water for human consumption, do not affect the quality of potable water according to the guidelines of BS6920 British Standard. The compounds and formulations of all materials are certified in accordance with the relevant standards.

## Materials

Elysée pressure piping systems are produced by U-PVC raw material which can be enhanced with additives in order to optimize its quality performance. The compound and formulation consist of U-PVC resin and the required additives are specified by the relevant standard of EN ISO 1452-2.

## Operating Temperature

A virgin material of U-PVC normally operates within a temperature range of 20°C to 70°C. Yet, the maximum allowable operating pressure is determined by the derating factor.

Additives are typically used in U-PVC production in order to increase the durability of the end product under higher temperatures.

## Sealing Ring

The sealing ring is a WA type, suitable for cold potable water which meets the requirements of the relevant standard of EN 681-1.

For each order, relevant information is provided to the customer, especially sealing ring's specifications and technical characteristics. The raw material of the sealing ring does not affect the quality of potable water in accordance with the British Standard of BS6920. In compliance with this standard and the relevant standard of EN 1452-5, it is assured that the sealing ring does not downgrade the properties of the pipes.

Refer to technical manual for more information

## General info

Traditionally, the market of domestic pipes has been dominated by the pipes of copper and galvanized iron, although in the last few years the plastic pipes have experimented a significant increment in their use in this market. In some parts of the world, the copper is still the dominant material although it is decreasing its use due to the increase of its cost and the robberies to melt. Although the first plastic materials developed for pipes could not compete with the properties of the traditional iron or steel pipes, the advances in researches and development of materials have made the plastic pipes to be nowadays one of the materials to choose for water supply, due to the economic and environmental balance that they represent.

## PE-RT Material

PE-RT (Polyethylene of Raised Temperature Resistance), is a further development undertaken with the aim of permitting the use of polyethylene materials even at elevated operating temperatures. The aim was to improve the HDPE materials by elevating the long-term hydrostatic strength at high temperatures without cross-linking as required for PE-X. Unlike the cross-linked polyethylene grades (PEX), this has been achieved by means of modification of the structure of the PE macromolecules, without any sacrifice of advantageous properties such as good resistance to stress-induced cracking and the toughness of the unmodified polyethylene. Through the modification process PE-RT gets a unique molecular structure and crystalline microstructure. The avoidance of chemical cross-linking process is one of the main reasons why PE-RT is suitable for use in all hot & cold water applications, it especially meets drinking water requirements.

## Benefits of Polyethylene Pipes

- Resistance to:
  - high temperature
  - freeze damage
  - corrosion
  - chemical substances
  - deformation under load
  - crack growth
  - impact
- Maintenance free
- Hygienic
- Long lasting
- Environmentally friendly
- Recyclable
- Ease of installation
- Outstanding flexibility
- Cost efficient
- Deposit free
- Energy saving
- Reduced water hammer noise
- Low thermal conductivity
- Good resistance to UV

## Applications of PE-RT

PE-RT type materials have been used successfully in domestic hot and cold water piping systems for more than 20 years. Because of the many benefits offered by PE-RT and the improved processability, it has become a preferable plumbing system.

An overview of applications areas is as follows:

- Cold and hot sanitary water supply
- Industrial applications
- Circuits of refrigeration

## Effect on Water

Water is essential to human life and the health of the environment. Water quality is commonly defined by its physical, chemical, biological and aesthetic (appearance and smell) characteristics. A healthy environment is one in which the water quality supports a rich and varied community of organisms and protects public health. Unsuitable non-metallic materials can cause changes in the quality of the water that they are in contact with. Pipes that are intended to be used for potable water supply systems should be manufactured concerning the requirements of the relevant standards. Elysée pipes are fully conformed to international hygiene and sanitary requirements that are indicated by the standard BS6920 (UK).

## Quality Inspections and Testing

Several tests are carried out to verify the compliance of our polyethylene pipes with the relevant standards through in-house testing as well as tests in external accredited laboratories. Furthermore, all quality procedures and practices are checked from the entry of raw material, until the delivery of the pipes to the customers. Out of the regular inspections of appearance, color, marking and geometric characteristics, several mechanical and material tests are carried out as mentioned below.

Elysée offers a comprehensive range of pipes and fittings, designed for all soil and waste discharge applications for commercial, industrial, housing and public sector developments. Our Soil, Waste, Underground & Overflow piping systems are available in a complete range of imperial series from Ø1½" up to Ø4" and straight lengths of 3, 4 and 6 meters. The systems can be found in six different colours of Olive Grey, Black, White, Light Grey and Terracotta to satisfy all tastes.

In order to ensure that all requirements of standards and regulations are fulfilled, Elysée's U-PVC plastics piping systems, are tested according to standards requirements in our well-equipped testing room.

Furthermore, Elysée EN 1329 piping systems are being tested and certified according to EN 1329, by external third party certification body (CERTIF PORTUGAL). Product certification has been obtained, ensuring EN 1329 compliance.

EN 1329 specifies the requirements for U-PVC piping systems regarding: Materials, Appearance, Colour, Geometrical Characteristics, Mechanical Characteristics, Physical Characteristics, Performance requirements, Specifications for the Sealing Ring.

## Quality Management

Our Quality management system ensures top-class products in terms of performance, reliability and durability. This is a crucial parameter to ensure customer satisfaction and loyalty. Elysée quality system, ISO 9001, is approved by CCC and IQNet.

## Certifications

Elysée's Soil and Waste piping systems comply with the EN 1329 European standard: Plastics piping systems for soil & waste discharge within the building structure. EN 1329 specifies the requirements and characteristics for soil and waste piping systems which are intended for outside the building structure or buried in ground within the building structure and outside the building. In compliance with this standard, Elysée ensures stable supply of reliable products with assured quality.

## Dimensions and Characteristics

Nominal dimensions of the piping systems regarding the mean outside diameters, nominal wall thickness and their tolerances comply with the dimensions determined in the relevant standard of EN 1329-1.

## Materials

Elysée pressure piping systems are produced by U-PVC raw material which can be enhanced with additives in order to optimize its quality performance. The compound and formulation consist of U-PVC resin and the required additives are specified by EN 1329-1 European Standard.

## Appearance

The internal and external surface of the U-PVC pipes are smooth, free from grooving and any other surface imperfections so as to comply with the requirements of EN 1329 - 1.

## Marking

All pipes are marked at intervals of equal length of 1 meter in consistency and the marking include:

Manufacturer name

Number of the International Standard

Material

Nominal outside diameter x wall thickness

Nominal Pressure

Manufacturer's Information (Date Code)

The codes presented on pipes and fittings indicate the application area, as follows:

B: Application area code for components intended for use above ground inside the building, or for components outside buildings fixed onto the wall

BD: Application area code for components intended for use for both B and D.

## Chemical Resistance

Chemicals can affect the strength, flexibility, surface appearance, colour, dimensions or weight of U-PVC products. The basic modes of interaction which cause these changes are:

Chemical attack on the polymer chain, which results in reduction of physical properties

Physical change, including absorption of solvents resulting in softening and swelling of the plastic

Stress cracking from the interaction of a "stress cracking agent" with internal or external stresses

The following table provides chemical resistance data of U-PVC piping systems:

Whereas: A: Recommended, B: Minor Effect, C: Not Suitable.

Chemical	Effect	Chemical	Effect	Chemical	Effect
Acetic Acid	C	Ethyl Chloride, Dry	C	Potassium Chloride	A

## NOTES

# GENERAL TERMS & CONDITION SUPPLY

## INTRODUCTION

Our supplies include the products specified in our "sales confirmation" and are subject to the following terms and conditions which the customer declares to know and to accept, excepting possible derogation stated in a written agreement. "Incoterms", as defined by the International Chamber of Commerce, shall govern all the foreign supplies.

## PRODUCTS

In order to avoid any misunderstandings, it is advisable to refer to the names and the codes of our catalogue and/or price lists for the indication of the products.

## PACKAGING

To reduce the delivery time and to help the customer stock the products, we reserve the right to convert the requested quantities in multiples of the standard packages, as shown in our catalogue.

Packaging is restricted to the standard dimensions of containers.

- 20 Feet container: 2.35 x 2.35 x 5.95 meters
- 40 Feet container: 2.35 x 2.35 x 12.00 meters
- 40 Feet HC container: 2.35 x 2.70 x 12.00 meters

*Elysée recommends this option.*

Actual packaging will appear on the Proforma invoice.

## INT DELIVERY

It has to be assumed ex- our warehouses and/or stores. We will indicate the delivery time terms for not available items.

## SHIPMENT

Shipment terms will be shown on our Proforma invoice. The goods travel at the purchaser's own risk.

## OWNERSHIP CLAUSE

The products supplied by us will remain our property until fully paid.

## PRICES

The prices applied will be those in force when the order is placed.

Our prices include standard packaging; special packaging, if required by customer, will be charged at cost.

## PAYMENT

For overseas supplies payments should be effected by opening an irrevocable confirmed letter of credit or,

1. Against draft or bank receipt at sight,
2. Against other form of payments to be agreed upon.

## GUARANTEE

We guarantee the good quality of our products in compliance with the standard listed in our catalogue. Our warranty will limit to the replacement of the faulty products, excluding any other liability in particular for damages caused, if any, whatsoever by utilization of our products.

This guarantee terminates and will be no longer valid one year after the delivery of the goods supplied.

## CLAIMS

Only claims reaching us by written communication within 30 days after invoicing date will be taken into consideration.

## CUSTOMER SERVICE

Our technical and commercial departments are available to the customers to provide any information on the characteristics and the application fields of our products.
